

**Outcome 1 - Solving for the Denominator**

Change the subject of the formula
to the letter in the bracket...

$$\text{1} \quad v = \frac{r}{c} \quad (c) \quad \text{2} \quad s = \frac{9}{d} \quad (d)$$

$$\text{3} \quad l = \frac{w - 5}{n} \quad (n) \quad \text{4} \quad d = \frac{y + 6}{u} \quad (u)$$

$$\text{5} \quad G = \frac{z^2}{k} \quad (k) \quad \text{6} \quad A = \frac{q}{b^2} \quad (b)$$

$$\text{7} \quad m = \frac{d^2}{8i} \quad (i) \quad \text{8} \quad e = \sqrt{\frac{17}{a}} \quad (a)$$
