Neighbouring star Proxima Centauri has Earth-sized planet

Scientists say their investigations of the closest star, Proxima Centauri, show it to have an Earth-sized planet orbiting about it.

What is more, this rocky globe is moving in a zone that would make liquid water on its surface a possibility.

Proxima Centauri is 4.2 light-years from Earth. One light-year is about 5.88 trillion miles. How many miles away is Proxima Centauri from Earth? Give your answer in scientific notation if you can!

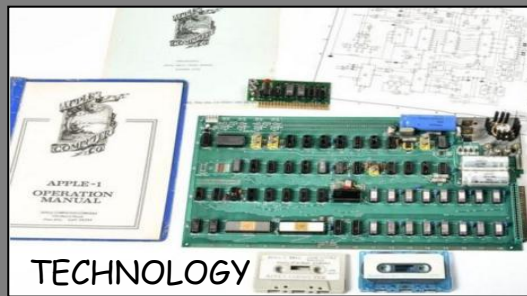

'First Apple computer' sells for \$815 000

A prototype Apple 1, a holy-grail item in electronics memorabilia, has been sold for \$815 000.

Apple co-founders Steve Jobs and Steve Wozniak built just 200 of the computers in 1976.

The Apple 1 originally went on sale in July 1976 at a price of \$666.66.

How much profit has this Apple 1 made?
