Solar Impulse completes Atlantic crossing with landing in Seville

The zero-fuel aeroplane, Solar Impulse, has touched down in Spain, completing the 70-hour Atlantic leg of its historic bid to circle the globe. The landing in Seville marked the end of the 15th stage of Solar Impulse's journey.

Stage 7 of the journey was from Nanjing (China) to Nagoya (Japan) - a distance of 2942 km. The time taken was 1 day, 20 hrs and 9 mins.

What was the aeroplane's average speed for stage 7 of the journey? Round your answer to 1 decimal place.

Airport scrooges will let TV pundit Dean Saunders off parking bill... but only if Wales win the Euros

He left his car in a £100-a-day 'short stay' car park because he didn't expect Wales to last so long in the tournament!

Wales played their first game of the tournament on 11th June. Assuming Dean flew out to France the day before this match and comes home the day after the final (10th July) what is the total parking fine he can expect when he arrives home???

India produces world's first £3 smartphone!

Freedom 251 is an Android phone advertised by Ringing Bells at 251 rupees (£2.77). In the hand, it feels somewhat like Apple's iPhone 5 and comes in two models, black and white. An iPhone 6+ typically costs £699. How many Freedom 251's can be bought for the price of an iPhone 6+?

School population rises by 121 000

The school population in England increased by 121 000 since last year, according to annual figures from the Department for Education.

It means there are 470 000 more pupils in the school system than in 2009.

A Department for Education spokeswoman said the government expected to deliver 600 000 more places by 2021.

Assuming the ratio of pupils : teachers = 30 : 1, how many additional teachers would be required to cover these extra places?
