## Exam Questions

## Question 1:

The diagram shows a right-angled triangle with height 1 unit, base 2 units and an angle of  $a^\circ$  at A.

(a) Find the exact values of:

(i)  $\sin a^\circ$ ;

(ii)  $\sin 2a^\circ$ .

4

(b) By expressing  $\sin 3a^\circ$  as  $\sin(2a + a)^\circ$ , find the exact value of  $\sin 3a^\circ$ .

4

## Question 2:

Given that

$$f(x) = \sqrt{x} + \frac{2}{x^2}, \text{ find } f'(4). \quad 5$$

## Question 3:

(a)  $12 \cos x^\circ - 5 \sin x^\circ$  can be expressed in the form  $k \cos(x + a)^\circ$ , where  $k > 0$  and  $0 \leq a < 360$ .

Calculate the values of  $k$  and  $a$ .

4

(b) (i) Hence state the maximum and minimum values of  $12 \cos x^\circ - 5 \sin x^\circ$ .

(ii) Determine the values of  $x$ , in the interval  $0 \leq x < 360$ , at which these maximum and minimum values occur.
