Exam Questions

Question 1:

The diagram shows a sketch of the curve with equation $y = x^3 - 6x^2 + 8x$.

- (a) Find the coordinates of the points on the curve where the gradient of the tangent is -1 .

5

- (b) The line $y = 4 - x$ is a tangent to this curve at a point A. Find the coordinates of A.

2

Question 2:

A triangle ABC has vertices **A(4, 3)**, **B(6, 1)** and **C(-2, -3)** as shown in the diagram. Find the equation of **AM**, the median from **A**.

(3)

Question 3:

The graph of a function f intersects the x -axis at $(-a, 0)$ and $(e, 0)$ as shown.

There is a point of inflexion at $(0, b)$ and a maximum turning point at (c, d) .

Sketch the graph of the derived function f' .
